Drop-down seals and finger protection for glass doors

Experience a safer
and more open world

Open look – closed off hazard areas

A glass door has many advantages. With Planet's new drop-down seals and finger protection solutions, there are many more. Because now you no longer need to do without important functions such as sound insulation and com-

pliance with regulations in nurseries or public institutions: The aesthetic solutions can be discreetly integrated into the respective glass architecture and thus meet every requirement in terms of design and function.

The new Planet finger protection combines the protection of children's hands and appealing design with fulfilment of legal regulations.

Safety with a clear view

In contemporary architecture, glass building materials are increasingly being used in nurseries. The new Planet finger protection combines the safety requirements with modern elegance.

The usual clever planetary finger protection functions are also consistently implemented: the quick installation, the clip and hook system for optimal door maintenance convenience and subsequent adjustment for maximum safety.

Advantages at a glance

- Trend colour: The new finger protection for glass doors is available in black, among other colours
- Thanks to the clip system, the profiles on the frame and leaves can be removed and reinstalled in seconds

The modular adapter profile allows retroactive adjustment of the cloth tension on the blind and thus guarantees the standard-compliant protection function

Open look – closed off to background noise

Whether as a partition wall, room-in-room system or for a light-flooded look: Our solutions for glass doors impress in terms of safety and design.

New colour, new design variety

In addition to the previously available anodised designs EV1 colourless and Inox style, the KG-S narrow drop-down seal (picture) is now available in black anodised finish.

The quick to install drop-down seal is therefore available as the perfect colour solution for any modern interior design.

The narrowest drop-down seal in the world for glass thicknesses from 8 millimetres

Planet KG-F drop-down seals: Perfect symmetries despite different glass thicknesses: The narrowest drop-down seal in the world ensures a symmetrical view of the front side from even the narrowest glass thickness of eight millimetres. A new feature is the drop-down seal for use with 16 mm thick glass, for fire doors, for example.

Advantages at a glance

- Trend colour black: The new black drop-down seal KG-S narrow blends in perfectly with black glass surrounds
- Quick and easy to fix in place: the KG-S narrow drop-down seals are fitted with optical foils in matching colour, as well as double-sided adhesive tape
- Uniform symmetrical design for a perfect look for Planet KG-F
- The expanded range for door thicknesses of up to 16 mm (KG-F16s) also enables use for smoke and fire doors made of glass

The ASSA ABLOY Group is the global leader in access solutions. Every day we help people to feel safer and more secure and to experience a more open world.
